Why Choose Internetters to Host Your Website?

Internetters has been providing reliable and resilient website hosting services since 1998. Our satisfied clients range from multinational corporations to sole traders. Internetters realises that a company's website and associated email services are critical. This is why we have developed our highly resilient business hosting solutions.

All of our servers are robust Sun Ultra10 (twin CPU, 1GB RAM) or Sun Enterprise E450 (quad CPU, 2GB RAM) or high-specification Windows servers. Each one is duplicated with its own hot standby backup server so that in the event of a serious problem we can rapidly switch all sites to the backup server.

Our world-class data centre is connected to six major Internet backbone carriers and has access to over 1.8GB/second bandwidth. Electrical power is taken from two separate grids with 24 hour uninterruptible power supply.

Our acclaimed VPOP email system enables both webmail and POP3 access to emails, with optional advanced virus and spam filters.

In addition to this impressive technology, we have a team of knowledgeable and helpful technical support staff, available by telephone and email plus a substantial support website. You can depend on Internetters' experience and expertise to maintain your web presence.
